PROFESSIONAL SUMMARY

Full Stack Engineer with 3+ years building and owning production ERP and multi-tenant SaaS platforms end to end — from API and schema design through deployment. Currently architecting AksharPOS, a multi-tenant SaaS product, with per-tenant database isolation and dynamic, cached connection routing. Works across Node.js, Express, React, TypeScript, and MySQL, with hands-on payment-gateway (Razorpay, Stripe, PayPal), messaging (WhatsApp Business API, Firebase, Socket.IO), and real-time integrations, and owns Linux/NGINX/PM2 deployments with GitHub Actions CI/CD. Focused on secure, performant systems: JWT/RBAC, query and cache optimization, and zero-downtime releases.

EXPERIENCE

Full Stack Engineer — AksharPOS Product

Aug 2025 – Present

Codebrain Infotech → Logicode Software LLP

- Architected a multi-tenant SaaS platform (AksharPOS) with per-tenant database isolation and dynamic, LRU-cached connection routing.
- Built 50+ normalized MySQL models across 10+ ERP modules; secured the API with JWT authentication and module-level RBAC.
- Designed an 18-template WhatsApp Business API library via Meta Business Manager for transactional and marketing messaging, including navigating Meta's approval workflow to get transactional templates classified as Utility rather than Marketing.
- Automated deployment on a Linux VPS (NGINX, PM2 cluster mode, GitHub Actions CI/CD); integrated Razorpay with webhook signature verification.
- Added Redis caching on hot-path queries to reduce database load under concurrent multi-branch traffic.

Full Stack Developer — Service-Based

Jul 2025 (1 month)

Codebrain Infotech

- One month of service-based client development work before transitioning to full-time product engineering on AksharPOS.

Full Stack Developer

Jul 2023 – Jun 2025

DI Solutions

- Delivered four major production systems: an HRMS covering attendance, leave, and employee management with role-aware dashboards and Firebase Cloud Messaging notifications; a Manufacturing & Logistics ERP (scrap processing, shipment, cargo, sales, and inventory); a Medical Record system with e-commerce features for category-wise medicine management; and a real-time, subscription-based chat platform.
- Built REST APIs, inventory, purchase, sales, shipment, and logistics features with React, Node.js, Express, and Sequelize/MySQL, following MVC architecture.
- Integrated Razorpay, Stripe, and PayPal for checkout flows; added real-time updates with Socket.IO and Swagger-documented APIs.

PROJECTS

AksharPOS ERP (Codebrain Infotech → Logicode Software LLP). Multi-tenant ERP/POS SaaS — shared API layer with per-tenant MySQL databases, 50+ models, 10+ modules, sub-30-second tenant onboarding, an 18-template WhatsApp Business API integration via Meta, live in production.

HRMS Platform (DI Solutions). Attendance, leave, and employee management system with role-aware dashboards and Firebase-powered real-time notifications.

Manufacturing & Logistics ERP (DI Solutions). Full system for scrap processing, shipment, cargo, sales, and inventory management.

Medical Record & E-Commerce System (DI Solutions). Category-wise medicine management with cart, checkout, and role-based access.

Real-Time Chat Platform (DI Solutions). Subscription-based chat system built on Socket.IO for real-time messaging.

TECHNICAL SKILLS

Languages

JavaScript, TypeScript

Frontend

React.js, Next.js, Redux Toolkit, React Query, Tailwind CSS, Bootstrap

Backend

Node.js, Express.js, REST APIs, Socket.IO, MVC Architecture

Database	MySQL, MongoDB, Redis, Sequelize ORM, Firebase
Auth & Payments	JWT, OAuth, RBAC · Razorpay, Stripe, PayPal
Messaging	WhatsApp Business API (Meta Business Manager, template management & approval), Firebase Cloud Messaging, Socket.IO
DevOps & Tools	Linux, NGINX, PM2, GitHub Actions, CI/CD · Git, GitHub, Postman, Swagger

EDUCATION

Master of Computer Applications (MCA) — Information Technology | **Bachelor of Commerce (B.Com)**
